Smt. Jankibai Rama Salvi College
Maharashtra

Kalwa,

BSc. Computer Science (Sem-III Pursuing) | CGPA: 8.64

2025-2026

Projects

Smart HR – Agentic AI System (SLM-based)

- Designed an agentic AI-driven HR solution using Small Language Models (SLMs) for resume analysis and decision support
- Implemented intelligent workflows for resume parsing, JD matching, scoring, question recommendation, automated email generation.
- Optimized model performance for domain-specific accuracy.
- Developed an SLM-powered HR chatbot to handle queries on HR policies, payroll, and benefits, reducing response time and manual effort. Built a scalable, low-latency microservices architecture using FastAPI for seamless interactions.

Learning Management System Platform

- Developed the Candidate module of an Enterprise Learning Management system support structured workforce upskilling and assessments.
- Designed features for dashboards, task tracking, and skill evaluation by analyzing platforms like Coursera.
- Contributed to backend workflows and frontend development.

Talentshire – AI-based Recruitment Platform

- Developed MCQs and multi-language coding questions with dynamic filters for efficient question retrieval.
- Skills extractor from job descriptions and recommend relevant assessment questions.

Plagiarism Detector for Source Code

- Built a code plagiarism detection system using Python, NLP, and Machine Learning to detect semantic and structural similarities.
- Combined TF-IDF-based semantic analysis with AST-based structural features and trained a Random Forest classifier.
- Deployed as a FastAPI service.

Machine Learning Projects

- Model on loan approval using applicant financial and demographic data, Performed data preprocessing, model training, and evaluation across multiple classifiers.
- Email context classification using NLP pipelines and text embeddings to categorize email content into predefined context

Technical:

- **Artificial Intelligence & ML:** Machine Learning, Deep learning, NLP, Small Language Models (SLMs), Model Fine-tuning, Prompt Engineering.
- **Natural Language Processing:** Text Classification, Embeddings.
- **Frameworks & Tools:** Python, Pandas, Numpy, PyTorch, TensorFlow, Scikit-learn, Fastapi, Django, React.
